

# HP headphone

## Audiodinamica Headphone key facts

- RCA inputs/outputs, can be used as stand alone simple preamp
- Complementary jFET+MOSFET design with two direct coupled stages with minimal feedback
- Integrated low noise power supply
- Alps film potentiometer
- Capable to drive almost any headphone
- Designed for a dynamic and energetic sound

## Details

---

### Headphone Amp

- 9dB gain, 100k input impedance, 0.01% THD on all loads, very low output impedance
- Super fast output protection disengages headphone in case MOSFETs exceed max DC offset voltage
- XLR4 or ¼ jack headphone connector
- Timbre: energetic, deep bass, sounds bigger and dynamic, low listening fatigue
- Large toroidal transformer with discrete regulated power supply
- IEC wiht filter to reduce disturbances from other appliances
